HAIR FOLLICLE DETECTION SYSTEM

AI Computer Vision Diagnostic & Follicular Health Laboratory

Patient Name:	Muhammad Gulfam	**Consulting Doctor:**	Dr. Dr. Usman
Patient ID:	PT-48514	**Specialization:**	Hair Restoration
Report Date:	September 8, 2026	**Diagnostic Engine:**	Deep CNN AI Model v2.4
Clinical Status:	Verified & Processed	**Verification:**	Digitally Signed & Validated

1. MICROSCOPIC TRICHOSCOPY & PRIMARY DIAGNOSIS

Scalp Trichoscopy Scan

(Micrograph Analysed)

AI DIAGNOSTIC CLASSIFICATION

Norwood Stage 5

Severity Assessment: **Significant Crown & Vertex Thinning**

Clinical Risk Level: **High / Progressive**

Inference computed via High-Density Convolutional Feature Mapping.

2. QUANTITATIVE FOLLICULAR METRICS & PARAMETERS

Diagnostic Parameter	Measured Value	Normal Reference Range	Status Assessment
Follicular Unit Density	120 follicles / cmï¿½	150 - 250 / cmï¿½	**Marked Density Reduction**
Terminal-to-Vellus Ratio	2 : 1 (Marked Miniaturization)	> 7 : 1 (Healthy)	**Miniaturization Present**
Hair Growth Phase (Anagen)	68% (Reduced)	85% - 90% Anagen	**Active Cycle**
Follicular Unit Architecture	Triple/Double Predominant	Multi-hair Groupings	**Balanced Distribution**
Peripilar Signs & Inflammation	Low / Negligible	Absent	**Healthy Scalp Barrier**

3. CLINICAL IMPRESSION & TREATMENT RECOMMENDATIONS

[1] Comprehensive dual medical therapy protocol under direct trichologist supervision.

[2] Consider adjuvant regenerative therapy (PRP / Mesotherapy) to stimulate dormant follicles.

[3] Clinical evaluation for surgical restoration / FUE follicular grafting feasibility.

Electronic Clinical Verification
